

1. Install the Python extension by Microsoft, create test.py, write `print("Hello from Python")`, and run the file to confirm the output appears in the integrated terminal.

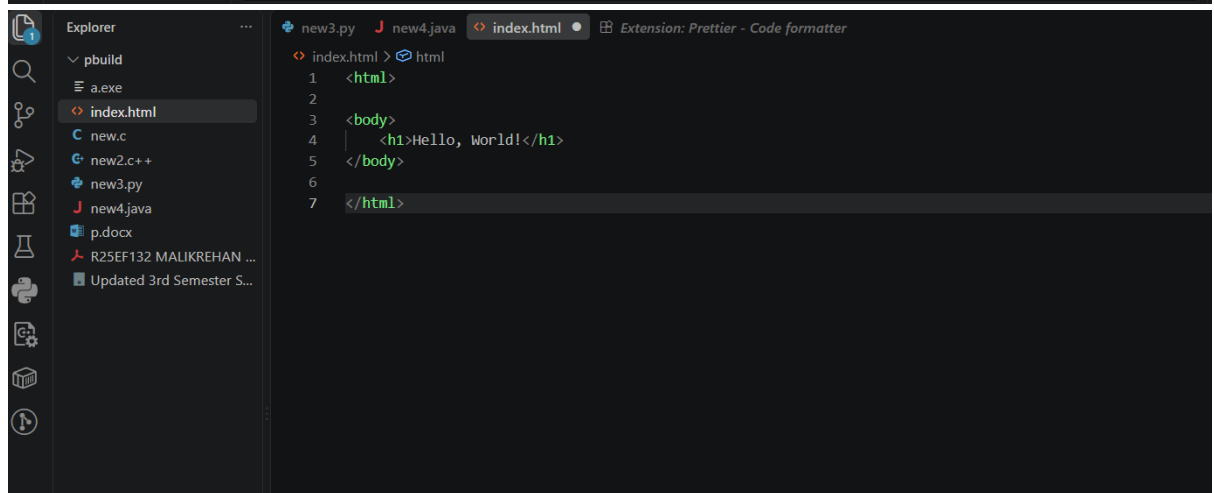

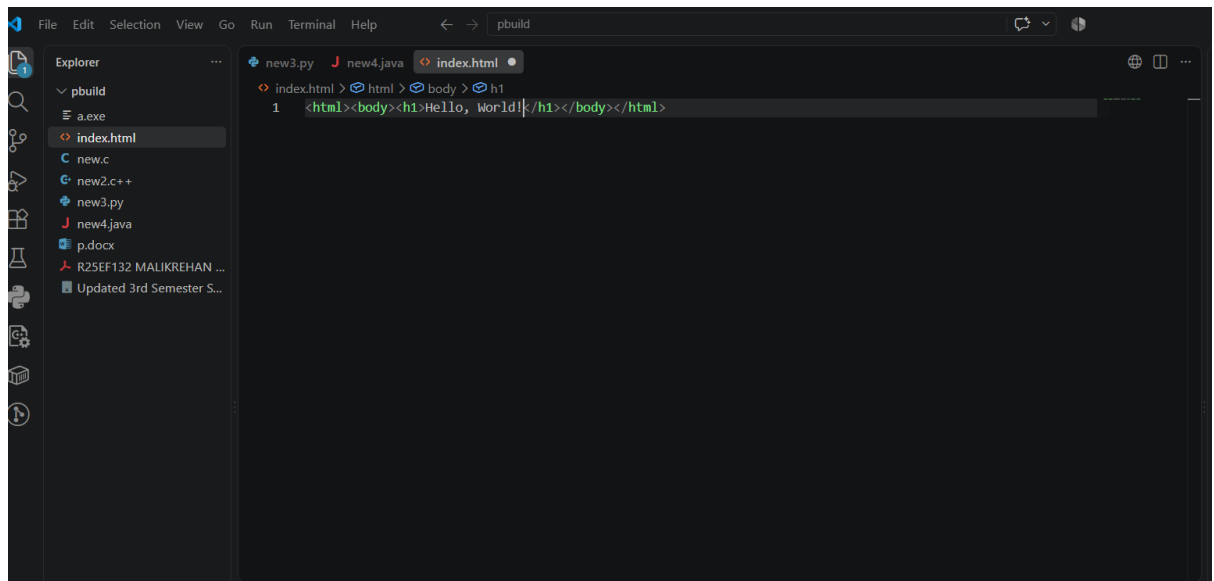

2. Install the Java Extension Pack by Microsoft, create Test.java with a simple Hello World program, and use the Run link above main() to confirm the Java output.

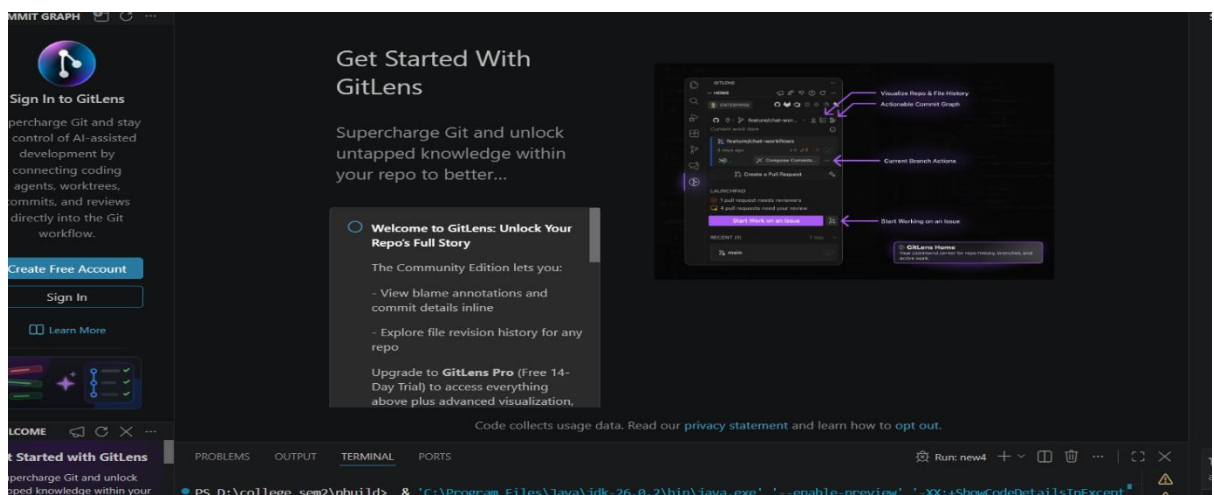

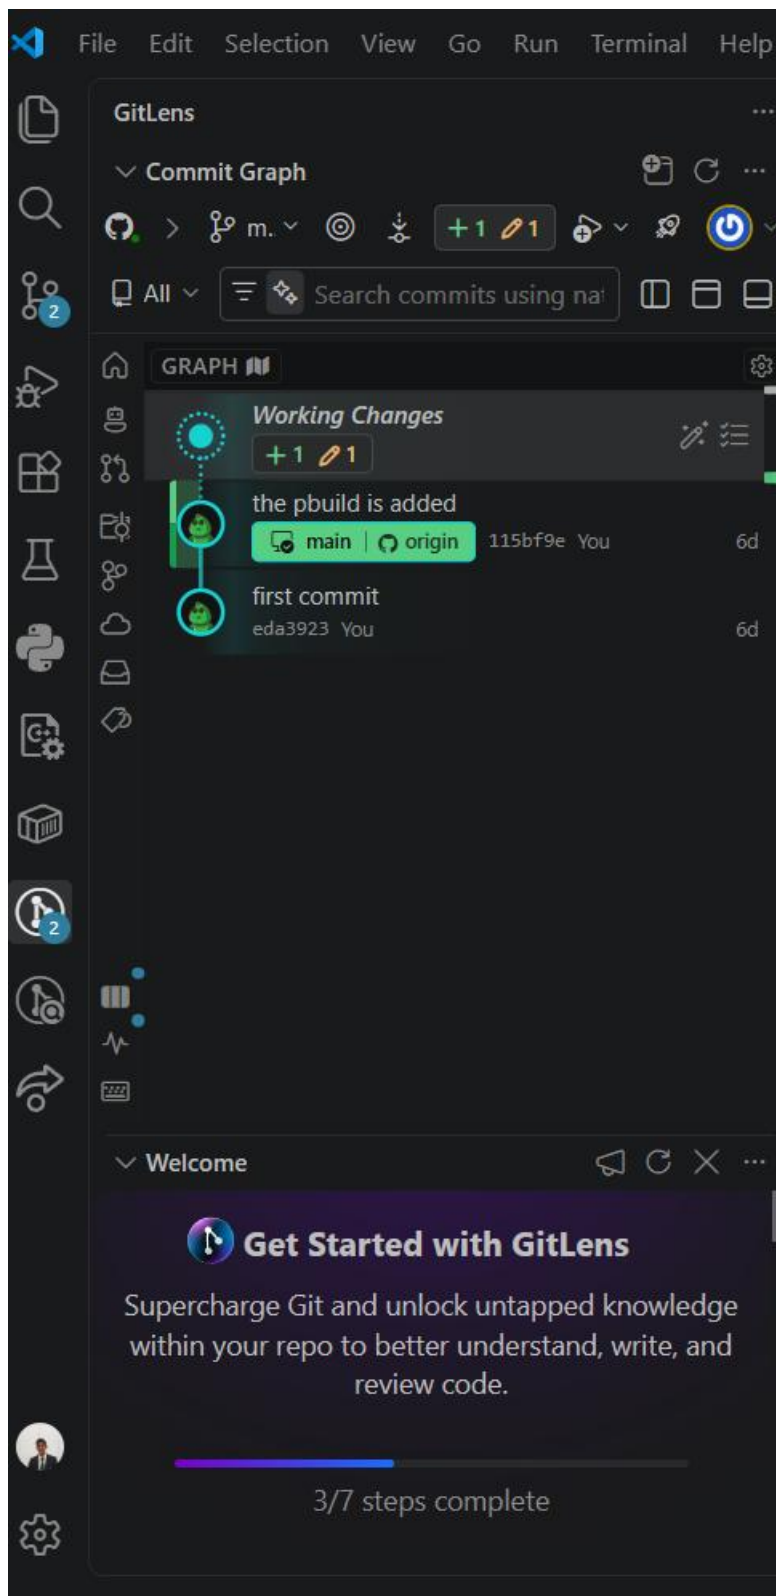

3. Install Prettier - Code formatter, open a JavaScript, HTML, or CSS file with deliberately messy formatting, and use Format Document to automatically normalize indentation, spacing, and quote style.

4. Install GitLens — Git supercharged, open a file inside a Git repository, and observe the inline blame annotations showing who last changed each line. Explore Commit Graph, File History, and Line History.

5. Install Live Share by Microsoft, sign in with a Microsoft or GitHub account, start a collaboration session, share the invite link with a partner, and observe both users editing the same file in real time.
